KSNU **Kunsan National University in Gunsan, Republic of Korea**

"Natural Language Processing and Artificial Intelligence"

http://dilab.kunsan.ac.kr

We seek to add talented young researchers and offer several full Master and Ph.D. Scholarships.

for a support of up to five years in our city, located 2 hours away from Seoul, Korea by public transportation. These days, it is obvious that data is the new oil of the 21st century. We also believe that we will be able to achieve the innovation of technology based on data-driven artificial intelligence of which the goal is the study of extracting insights hidden in raw data and proposing state-of-the-art data-driven applications. Our background are around text mining, information retrieval, machine learning, and artificial intelligence, mainly working on main challenging problems in natural language processing areas:

- Abstractive Summarization, Opinion Summarization
- Computational Creativity
- Emotional Chatbot
- Multi-Agent Reinforcement Learning

Students enjoy a great research environment, close mentorship by professors, interaction with many peers, enormous computing power with the laboratory, and significant travel funding. The professors and their research groups ensure high quality research and will supervise graduate students.

Applications must be submitted to bwon@kunsan.ac.kr by April 30, 2022. Please include

- Curriculum vitae and copies of certificates/transcripts
- One letter of recommendation written by your supervisor/professor who knows you well
- Master's thesis or scientific papers if you have

More information about the program and the application process is at http://dilab.kunsan.ac.kr
